#Project1

Title:	EDW
Client	TELE2
Period:	Jun 23 – Till date
Team Size:	12
Role:	ETL Developer.
Technology:	Informatica, Oracle, Unix, Cognos.
Description:	We have layered architecture, STAGING layer holds the oltp data, and Business DW layer holds the business data and Enterprise DW layer hold the star schema. EDW data warehouse positioned as the single integration platform in the IT landscape. The access layer has standardized data marts providing insights and information for reporting and analytical purposes.

Responsibilities: Designing mapping in Informatica Power Center.

Coding in Informatica, created mappings using transformations like Aggregator, Union, Expression, Joiner, Sorter, Lkp, Expression, Update strategy etc.

Worked on writing unit and integration test cases.

Used Informatica Power Center for extraction, transformation and loading data from admin source systems into target database.

Involved in extracting the data from the database & Flat file.

Involved in development of ETL jobs related to all stages in the Project i.e STAGING, Business DW, Enterprise DW.

Worked on performance issues.

Worked on sample report creation for validation of the data.
